Semantic Bridge

Metric views into semantic models

SQLBits 2026

Who

Greg Baldini

Core Developer

Lead designer and developer of semantic bridge; work on language features and parsers; strong contributor to scope creep

in linkedin.com/in/gregbaldini/

Tabular Editor

What is the semantic bridge?

- Framework for model to model compilation
- Implementation of metric view -> semantic model compilation with SQL translation
- Object models for semantic layers

Why is the semantic bridge?

- Organizations are poly-plaftorm
- The promise of semantic layers is reusable business logic
- Performance is best with data locality and native storage formats

How does the semantic bridge bridge?

- Ingestion
  - Deserialization
  - Validation
- Mapping
  - Input platform format -> abstract model -> output platform format
  - Expression translation

Where is the semantic bridge?

Platforms

- Ingestion
  - Databricks metric view
- Output
  - TOM (Microsoft semantic model for SSAS Tabular, AAS, Power BI, Fabric)

Products

Tabular Editor 3: Enterprise edition and free trial

Demos

Import
Programmatic manipulation
Validation

When is the semantic bridge?

Past

- Conceived at SQL Bits 2025, over a pint
- Released January 2026

Present

- Support for v1.1 metric view metadata serialization / deserialization
- Metric view object model
- Validation rules framework
- Full scripting interface
- Limited SQL -> DAX translation

Future

- Enhanced GUI
- SQL parser for improved expression translation
- Full v1.1 metric view metadata translation support
- … !

Resources

- Documentation
- Introduction
- What is a semantic layer?
- Semantic model docs (Microsoft)
- Metric view docs (Databricks)
